Bluetooth traffic monitoring

Vehicular traffic estimation through bluetooth detection

Paolo Valleri - paolo.valleri[at]tis.bz.it

The 3-steps idea

- 1. Discover Bluetooth devices
- 2. Couple each response with the current timestamp
- 3. Analyse the data gathered

paolo.valleri[at]tis.bz.it

What is the talk about? 1/3

Bluetooth devices can be set as:

- Visible
- Limited
- Invisible

paolo.valleri[at]tis.bz.it

What is the talk about? 2/3

Inquiring visible in-car bluetooth devices:

- Headsets
- Navigations

Entertainment system

paolo.valleri[at]tis.bz.it

What is the talk about? 3/3

- Bi Most of them are VISIBLE by default

paolo.valleri[at]tis.bz.it

What is the talk about?

3/3

Make an active query nearby a vehicle lane Get a response

paolo.valleri[at]tis.bz.it

Is it worth?

Empirical results proof we get at least the 25% of the total vehicle flow

paolo.valleri[at]tis.bz.it

- 1. Why is it needed?
- 2. Which technologies have I used?
- 3. How does it work?
- 4. What kind of results have we got?

paolo.valleri[at]tis.bz.it

1. Why is it needed?

The INTEGREEN project

INTEGRATION OF TRAFFIC AND ENVIRONMENTAL DATA FOR IMPROVING GREEN POLICIES IN THE CITY OF BOLZANO

EU project funded by the LIFE+ program

paolo.valleri[at]tis.bz.it

We need data!

Data about:

- Traffic
- Meteo
- Pollution
- Parking
- Bus timetable

• ...

paolo.valleri[at]tis.bz.it

Vehicular traffic data

- Count cars passing by a monitored area:
 - → trends at single stations

- Elapsed time to pass through two monitored areas:
 - → Origin destination
 (O/D) matrix

O/D: cameras

- Expensive
- Difficult deployment
- They need electricity
- High bandwidth

paolo.valleri[at]tis.bz.it

2. Which technology have I used?

Hardware

Raspberry-pi

- Arm full-pc 700Mhz
- 512Mb
- 2USB
- credit-card-sized
- 35\$
- Model A consumes 120mA/h

paolo.valleri[at]tis.bz.it

Software

paolo.valleri[at]tis.bz.it

Software: bluelog

1/2

https://github.com/ilvalle/Bluelog

- Initially developed by Tom Nardi and licensed as GPLv2
- It inquiries seamless for discovering new bluetooth
- Rely on a sqlite DB as local storage for cache purpose

paolo.valleri[at]tis.bz.it

Software: vtraffic

2/2

https://github.com/ilvalle/vtraffic

- Web2py app for analysing all data gathered
- AGPL Licence
- Written in python
- Owns an internal scheduler to run periodic tasks
- http://traffic.integreen-life.bz.it

paolo.valleri[at]tis.bz.it

The white boxes

1/3

Fixed

paolo.valleri[at]tis.bz.it

The white boxes

2/3

Fixed

- Raspberry-pi / Bluetooth device
- 3g connection
 - Vpn
 - Live update
 - Monitoring (Ganglia)
 - (real) time data delivery

Mobile

- Raspberry-pi / Bluetooth device
- Battery powered
- Local data stored
- (no-real) time data delivery

paolo.valleri[at]tis.bz.it

Real deployments

Fixed

• 12 fixed stations deployed

Vittorio veneto	2013-03-21 18:00:34
Tis*	2013-07-10 08:59:19
Castel Firmiano	2013-10-23 13:06:12
Viale Druso Poste	2014-04-09 10:33:08
Via Rosmini	2014-02-06 10:16:07

- Mercatino di Natale 2013
- Laives
- Test Viale Druso
- Test Castel Firmiano
- Several minor tests (es, tis)

paolo.valleri[at]tis.bz.it

Real deployments = Read data

Vittorio veneto	2013-03-21 18:00:34	914851	2617	2 lanes
Tis*	2013-07-10 08:59:19	2062804	3712	2 lanes(one way)
Castel Firmiano	2013-10-23 13:06:12	914851	2655	2 lanes
Viale Druso Poste	2014-04-09 10:33:08	1102408	4458	4 lanes
Via Rosmini	2014-02-06 10:16:07	527789	2600	1 lane
All mobiles stations	2012-11-29 12:20:43	350831		

paolo.valleri[at]tis.bz.it

Real deployments = Read data

2 years more than 11 millions detections and counting...

The 12 fixed stations gather together almost 40000 detections per day

3. How does it work?

Monitoring vehicles (station A)

paolo.valleri[at]tis.bz.it

Monitoring vehicles (station B)

paolo.valleri[at]tis.bz.it

Supervisor centre

paolo.valleri[at]tis.bz.it

Pairing matches

Periodically (ex: every 5m) records are elaborated

paolo.valleri[at]tis.bz.it

Given several matches from A to B we can

1. Plot the mean elapsed travel aggregated for specific time windows (ex: 15m)

3. Provide information in (about)-real-time

1. Plot the mean elapsed travel time

2. Study flow behaviors

3. Provide information in (almost)-real-time (1)

Real time	Vehicles detected	Compare	Мар	Origin destination	Flows	■ Period: 1 week ▼	
In this frame are shown average elapsed times for the current traffic situation. When the latter is getting better with respect to previous samplings data are highlighted in green, orange otherwise.							

+ Castel Firmiano	+ Castel Firmiano	✤ Viale Druso
◊ Viale Druso	• Via Rosmini	• Via Rosmini
0:04:42	0:08:43	0:03:46

3. Provide information in (almost)-real-time (2)

4. What kind of results have we got?

1' Experiment

Shortest path 3Km passing through 4 traffic lights (all on-demand)

paolo.valleri[at]tis.bz.it

1' Experiment

2/2

Median values: yellow peak --> 5:56 blue peak --> 10:12

paolo.valleri[at]tis.bz.it

For years several cars passed through Laives to reach/leave Bolzano (commuters)

1/4

Feriod: 3 months -Real time Vehicles detected Origin destination Flows Compare Map Starting station 00:12 Laives North . 00:10 Destination station Laives South 00:08 2 Hide/Show all Thu 14, Nov | 17:07 | 00:07:28 00:06 DAYS Wed 13, Nov 00:04 Thu 14, Nov Fri 15. Nov 00:02 Sat 16, Nov Sun 17, Nov 00:00 Wed 27, Nov 08:00 10:00 12:00 14:00 16:00 18:00 20:00 Thu 28, Nov Fri 29, Nov Sat 30, Nov

2/4

Since January 2014 a new tunnel allows people to reach/leave Bolzano without passing through the city of Laives.

Results?

Early monitoring sessions claim that the elapsed travel time increased.

By monitoring cars entering and leaving the city we monitored those that have a stop.

People still pass through the city for needs, which demand a few stops.

Power supply: solar-panel vtraffic: improve graph/map/console etc

paolo.valleri[at]tis.bz.it

Conclusions

• I presented an alternative approach to monitor vehicular traffic

 Easy-to-deploy and cheap prototype powered by FOSS

paolo.valleri[at]tis.bz.it

Thank you for your attention
